

## Information for GTTSE'2015 Participants

Matthew B. Dwyer<sup>1</sup>, Antonio Filieri<sup>2</sup>, Jaco Geldenhuys<sup>4</sup>, Mitchell Gerrard<sup>1</sup>,  
Corina Pasareanu<sup>3</sup>, and Willem Visser<sup>4</sup>

<sup>1</sup> University of Nebraska – Lincoln

<sup>2</sup> University of Stuttgart

<sup>3</sup> NASA Ames Research Center

<sup>4</sup> University of Stellenbosch

The following paper is a **DRAFT** of the final paper that we plan to prepare. Our goal is to provide an accessible entrance to the deep and technical literature on probabilistic program analysis. As a GTTSE participant you are in a position to help us achieve that goal.

Towards that end we encourage you to send us an email, at `dwyer@cse.unl.edu`, with a title beginning “Feedback on GTTSE paper” where you let us know what you think. In particular, we welcome suggestions for parts of the development where we might provide a clearer or more explicit explanation of the ideas.

We have a number of ideas along these lines, e.g., replacing some of the examples with ones that are more complex, adding some visualizations to supplement textual explanations. We will mix our ideas with yours and try to come up with a paper that is useful to the broader community.

We’ll be happy to thank you for your contributions so do include your name in the email.

See you in Braga
